About Me

Family has always been at the core of my values, shaping who I am and how I approach life and work. The support, empathy, and resilience I've gained from these relationships inspire me to bring the same dedication and teamwork to my professional environment. Understanding the importance of trust, open communication, and commitment within a family setting translates directly to fostering a positive and collaborative workplace culture, which I believe is essential for success.

Growing up in a close-knit family taught me the significance of reliability and accountability, traits I carry into my professional life. Family has shown me how essential it is to be present, to listen, and to work towards shared goals, even when challenges arise. This experience helps me approach work with patience and persistence, seeing projects through with the same dedication I would apply to my family commitments. I believe that the values rooted in family life—such as integrity, cooperation, and compassion—create a solid foundation for building trust and driving success in any team.

CASE STUDY

Out of all the courses I've taken, I think the biggest “reality check” experience I've had would be the creation of the actual FalconForge website in WEB2620. What started off being another assignment quickly became a realisation that I had actually created something (off the top of my head) from scratch and made it functional and live on the internet. It was hard, there is no denying that, for being my first fully functional multi-page website (even with basic styling), it was awesome! Although it still had its flaws, I was able to see a new perspective on the UX Design community as well as a new perspective of what challenges I might see later on down the road in life and work experience. By taking that “first” big step and creating something unique like that, I was able to get a glimpse of what the future may hold for me and for what my education has been leading me to. I've still got a lot to learn and practice, but this was definitely a start in the right direction!

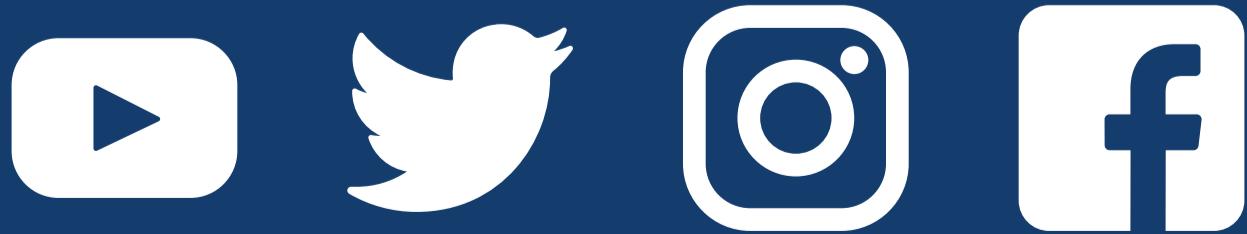

WEB1400

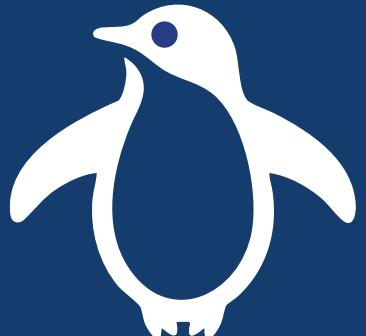

Free Hugs Animal Shelter HTML/CSS Page

In this course, we learned the fundamentals of HTML and styling through CSS, creating our final project based on a fictional employer who needed a new website. In this case, the employer was a local nonprofit animal shelter that needed my expertise.

The screenshot shows a website for 'Free Hugs Animal Shelter™'. At the top, there are navigation links for 'Adoption' and 'Contact Us'. The main title 'Free Hugs Animal Shelter™' is displayed above a large image of a black and white cat and a brown and white dog. Below the image is a quote: 'If you haven't given a dog a hug, you live a sad life.' -Ethan Bird. A note says '(Psst! Play copyright-free music for a more heartwarming experience!)'. A video player shows a video at 0:00 / 3:25. A question 'What is our mission and purpose?' is displayed. The footer text reads: 'We here at the Free Hugs Animal Shelter™ want everyone to experience the love and companionship of a special animal in their life! Contact Us if you are interested in adopting an animal. Currently, we sell Dogs, Bird, Cats, and Wild Jumping Dogs (from Australia.)'. A blue button at the bottom says 'View Website'.

Javascript Basics in Codepen.io

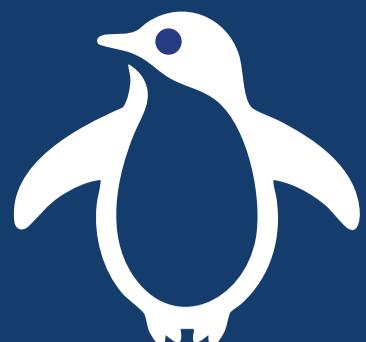

This class, introduced the JavaScript language, focusing on advanced language features and client-side web programming. The topics that were covered include basic syntax, object-oriented programming, higher-order functions, the DOM, and AJAX. We mainly used Codepen.io for assignments and learning activities, which I will link to a few of below.

JS-Counting/Handling Attributes

JS-Modifying Page Structure

JS-React to Events

WEB2500

UX Design of FalconForge Website

In this course I learned the four-step user experience design process which includes user research, design, testing, and implementation. In doing so, I created a basic mockup for both mobile/desktop use.

The mockup shows a dark-themed website for FalconForge Studios. At the top, there's a navigation bar with the studio's logo, a red circular icon with a white falcon, and the text 'FALCONFORGE STUDIOS'. The navigation links are 'Home', 'Community', 'Store', 'Contact Us', and 'Login/Register'. The main banner is a large, bold '50% CYBER MONDAY' sale for 'ALL ITEMS'. Below the banner, there are three customer reviews with small profile pictures: Gerald (7.8/10, 'New game was amazing!'), Sophia (6.8/10, 'Hey, it wasn't bad!'), and Gerald again (9.5/10, 'Absolutely incredible.'). A large block of placeholder text follows. At the bottom, a blue button with the text 'View Mockup' is visible.

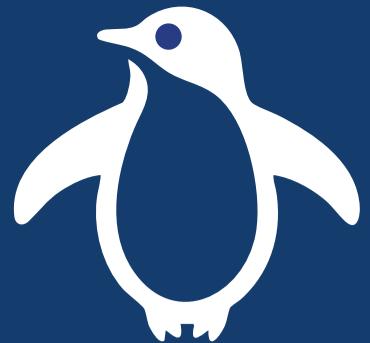

WEB2620

Web Design of FalconForge Website

In this course I learned more CSS properties and specifications is essential in client-side web development and design. Using resources like SASS and Bootstrap to assist my CSS and HTML, I coded the previous classes mockup (WEB2500), a reality!

The screenshot shows the homepage of the FalconForge website. At the top, there is a navigation bar with the FalconForge logo, links for Home, Community, Store, and Contact Us, and a Login/Register button. The main banner features a large, bold text "50% CYBER MONDAY SALE OFF" in yellow and white. Below the banner, there are three customer reviews with circular profile pictures: Gerald (7.8/10, "New game was amazing!"), Sophia (6.8/10, "Hey, it wasn't bad!"), and Gregory (9.5/10, "Absolutely incredible."). A dark blue footer bar at the bottom contains social media icons for Facebook, Instagram, YouTube, and Twitter, and the text "©FalconForge Studios". A large blue "View Website" button is centered at the bottom of the page.
